

GSM FCT (Fix Cellular Terminal)

Fix Cellular Terminal (FCT) is used to convert your GSM SIM card as land line.

Installation Procedure:

Insert your GSM SIM card in to SIM Slot on FCT.

Connect Antenna for receive better network.

Connect regular telephone instrument to Line1 Port of FCT.

Connect power adapter to GSM FCT to power on.

You can get dial tone of your GSM SIM card on telephone instrument.

Dial and receive phone calls on regular telephone instrument coming on your SIM card.

Ports on FCT Device:

Line1: to connect telephone instrument

Line2: parallel port of line1 (you can attach parallel phone or telephone recorder to this extra port)

Antenna: connect antenna for receive better signal of GSM network

Power: connect power adapter

On/off Switch: On/off power supply to FCT device

Benefits:

You can use your GSM SIM as landline.

Crystal clear voice on phone instrument.

Connect FCT to your PBX as a separate line.

Extend the antenna out side of your room if network is weak inside room.

Caller-ID display on FCT gives caller identification number on incoming calls.

Move the FCT when change of office place, keep the same office contact number.

You can connect the FCT to Telephone Recording units. You can record calls made through SIM card by installing GSM FCT.
